ALPX RANGE

3D TEXTURED CLIMBING HOLDS

AlpX is a technique for designing and producing a new skin for climbing holds that offers unique performance, comfort and aesthetic qualities.

Exceptional longevity due to low surface wear and high resistance to pore magnesia powder clogging makes the holds more environmentally friendly and economical.

This technology is the next step in the evolution of the hitherto artisanal world of climbing holds at no extra cost, bringing new fields of exploration to climbers.

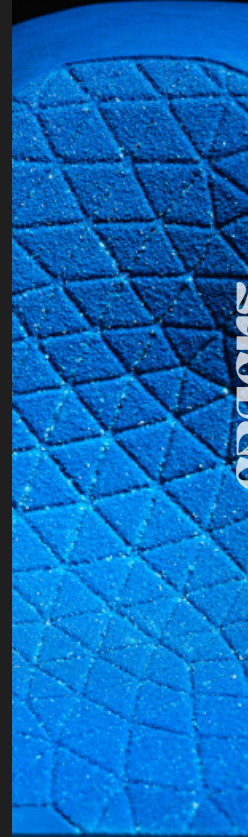

EXPERIENCE THE INNOVATION

1 Innovative Material

GreenMix is an innovative blend. Between polyurethane resin and polyester resin, GreenMix is a hybrid material with surprising properties. A French innovation that offers a new way of making climbing.

2 Technical Material

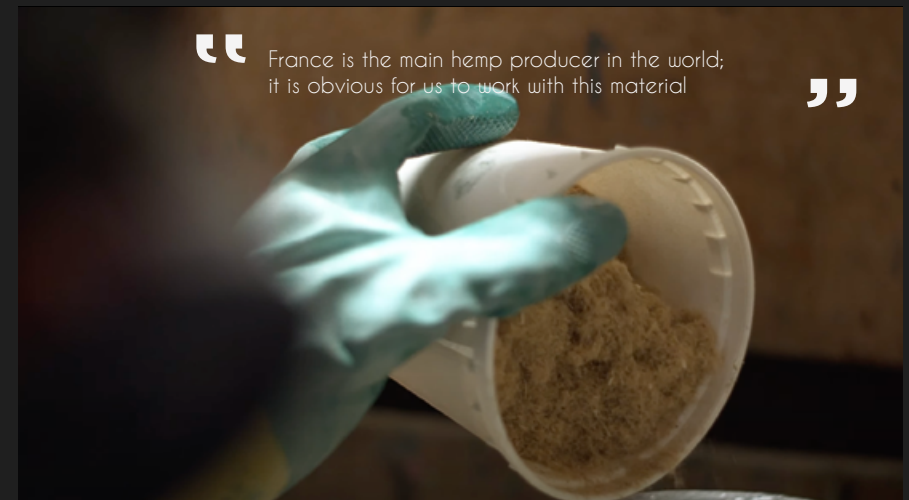

GreenMix is a technical subject. It retains the positive properties of polyester resin such as: the durability of the exemplary grain, strong UV resistance, reasonable cost. The disadvantages are avoided: the natural material makes our mixture of a good lightness, a robust resistance and a better resistance to shocks.

3 Ecological Material

GreenMix is a recycled, fortified and durable material. Our innovative use of hemp fibre adds lightness and robustness to this hybrid material. Thanks to recycled PET and bio-sourced materials, the share of nonrecyclable materials in our mix is significantly reduced. 1 recycled plastic bottle for 1 liter of GreenMix made ! All raw materials come from French production, which promotes the country's economic development while promoting ecology.

“ Made from recycled or biosourced materials, recycled PET plastic bottles that are reused in GreenMix ”

“ France is the main hemp producer in the world; it is obvious for us to work with this material ”

JUGS DOWN XL

DOWNCLIMBING HOLDS

In bouldering, a fall to the ground with a bad landing is the 3rd cause of injury. It causes damage (sprains and dislocations) especially to the joints: ankles, knees and wrists. Promoting down climbing allows everyone to climb more safely. Down climbing avoids successive falls which produce shock waves absorbed by the lower back.

Meticulously designed, JugsDown XL offers optimal grip to climbers. The down climbing is safe and comfortable. The cylindrical shape of the grip provides a hook that maximizes friction forces for calm down climbing !

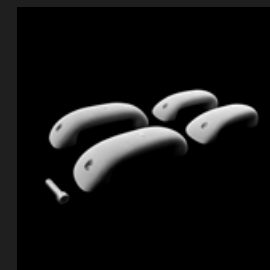

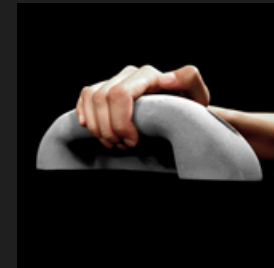

Suitable for slabs with their slight prominence, it can also be used on slopes. A large space at the back of the grip does not limit the stop of the fingers when gripping it. It provides ideal grip when the grip is located downstream of the downspout or on an inclined wall. JugsDown XL is wide enough to easily bring/change hands. Without protrusion thanks to its flared shape, we avoid shocks to the head, elbow and knee during an ascent.
